## GREASING OF UNIVERSAL JOINTS AND SLIP YOKES

### SERVICE/TECHNICAL

DATE: 5/3/2003

**TO: All Service Departments.**

Dana Spicer Australia advises that universal joints and slip yokes MUST be lubricated correctly during service or when replaced.

Use good quality E.P (extreme pressure) grease meeting N.L.G.I. Grade 2 specifications.

#### INITIAL LUBRICATION FOR 10 SERIES & SPL U.J's:

After the U.J kits are installed into the yokes and prior to placing in to service, they should be re-lubed through the lube fitting. Purge all four seals of each U.J this flushes abrasive contaminants from each bearing assembly and assures all four are filled. Pop the seals, Spicer seals are made to be popped.

#### SERVICE LUBRICATION FOR 10 SERIES & SPL U.J's:

At the correct service intervals Refer to service manual 3264-2 all U.J's must be lubricated. U.J's should be re-lubed through the lube fitting. Purge all four seals of each U.J this flushes abrasive contaminants from each bearing assembly and assures all four are filled. Pop the seals, Spicer seals are made to be popped.

#### LUBRICATION FOR 10 SERIES SLIP YOKE SPLINES:

The lubricant used for u-joints is satisfactory for slip yoke splines. Apply grease gun pressure to the lube fitting until lubricant appears at the pressure relief hole in the plug at the slip yoke end of the spline. Then cover the pressure relief hole with your finger and continue to apply pressure until grease appears at the slip yoke seal.

#### **Warning**

Failure to grease U-J's and Slip yoke splines will result in premature failures and possibly driveline separation from the vehicle.

**Failure to comply with this bulletin may void warranty.**
